                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 511, Application US/09791378

Patent No. US20020142303A1

GENERAL INFORMATION:

APPLICANT: Parekh, Rajesh

TITLE OF INVENTION: PROTEINS, GENES AND THEIR USE FOR DIAGNOSIS AND TREATMENT OF

TITLE OF INVENTION: SCHIZOPHRENIA

FILE REFERENCE: 9195-061-999

CURRENT APPLICATION NUMBER: US/09/791,378

CURRENT FILING DATE: 2001-02-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Maximum Match 100% Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                         US-09-674-716B-17

                                                                                                                                                                                                                                                                                                                                        This sequence represents the light chain variable region (VL) of humanised anti-CD23 (PCERII) monoclonal antibody Cl1, composed of a human framework (HSIGKVII) and the light chain complementarity determining regions (see AAV32254-56) of murine antibody Cl1. The DNA was constructed by splice overlap PCR. The invention provides altered antibodies, such as chimseric or humanised antibodies, which comprises sufficient of the amino decid sequences of the Cl1 light and heavy chain complementarity determining regions to render them capable of binding to the CD3 type II molecule expressed on haematopoietic cells: The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple sclerosis, diabetes, uveitis, inflammantory bowel disease, unciriar, nephrotic syndrome, glomentlonephritis, inflammantory bowel disease, uncerative collitis, Grohn's disease, Sjogren's syndrome, allergies, allergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, eczema, graftversus-host disease, COPD, insullitis, bronchitis (particularly dispersed) and backli for studying interactions malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and determining the binding agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  181 TCAGGGGTCCCTGACAGGTTCAGTGGCAGTGGGTTCAGGCACAGATTTTACACTGAAAATC 240

The invention relates to a novel chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CBOO. The anti-CDAO antibody of the invention demonstrates cytostatic, virucide, antibacterial, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder souch as cancer, viral and bacterial infection or genetic, primary or combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD4O antibodies may also be useful for detecting CD4O in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD4O antibody variable region light chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anti-CD40 monoclonal antibody; CD40; cytostatic; virucide; antibacterial; immunostimulant; anti-HIV; hyperproliferative; cancer; viral; bacterial infection; immunodeficiency; neutropenia; HIV; gene therapy; human; variable region light chain; 23-28-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or

The sequences are useful in therapeutic, diagnostic and research methods. The polymucleotides may be used in the field of molecular biology as hybridisation probes, primers for PCR, for chromosome and gene mapping, for the recombinant production of protein, or in generation of anti-sense DNA or RNA. polymucleotides are useful in diagnostics as expressed sequence tags

(ESTs) for identifying expressed genes or for physical mapping of the

(human genome. The proteins may be used as molecular weight markers, or as

nutritional sources or supplements. The proteins may be used to maintain

and expand cell population in a totipotential or pluripotential state

(useful for re-engineering damaged or diseased tissues, transplantation,

manufacture of bio-parmaceuticals or the development of bio-sensors. The

polymucleotides and proteins are useful for preventing, treating or

ameliorating disorders involving aberrant protein expression or

biological activity, e.g., haematopoietic disorders, central/peripheral

nervous system diseases, mechanical and traumatic disorders, non-healing

voral, bacterial or fungal infection, autoimmune disorders, allergic

reactions and conditions, coaquiation disorders, allergic

polymucleotide sequences of the invention were assembled from ESTs

isolated mainly by sequencing by hybridisation, and in some cases,

sequences obtained from one or more public databases. Note: The sequence

data for this patent did not form part of the printed specification, but

was obtained in electronic format directly from WIPO at

ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      237

                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHrP). The monoclonal antibody or its fragments, following the stimulation of PTHrP has the following properties: (a) inhibits intracellular elevation of PTHrP (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metassessis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphataemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHrP monoclonal antibody clone protein sequence from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121 TACCTGCAGAAGCCAGGGCAGTCTCCACAGCTCCTGATCTATTTGATGTCCACCCGGGCA 180

The invention relates to a novel chimeric or human monoclonal antibody or lits antigen-binding portion that specifically binds to and activates human CB40. The anti-CD40 antibody of the invention demonstrates cytostatic, virucide, antibacterial, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder souch as cancer, viral and bacterial infection or genetic, primary or combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD40 antibodies may also be useful for detecting CD40 in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody variable region light chain protein of the invention.
                                                                                                                                               New chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or

antidiabetic, antipsoriatic, immunosuppressive, dermatological, antityroid, nephrotropic, immunosuppressive, dermatological, antityroid, nephrotropic, ihyromimetic and hepatotropic activities, and suppressing activation of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system, suppressing activation or proliferation of a cell of the immune system with another cell, timunosuppressing a patient and for killing a cell expressing an antigen, human leukocyte antigen (HLA)-DR on the surface of the cell, where neither cytocoxic entities on the killing. (I) (optionally linked to cytotoxic or immunogenic agent) is useful for preparing a pharmaceutical preparation for the treatment of rheumatoid arthritis, juvenile arthritis, multiple sclerosis, Grave's disease, insulin-dependent diabetes, narcolepsy, psoriasis, systemic lupus crythineatosus, ankylosing spondyllitis, ransplant rejection, graft versus host disease, Hashimoto's disease, myasthenia gravis, pempiagus vulgaris, climulonephritis, thyroiditis, pancreatitis, insulitis, primary biliary climulonephritis, thyroiditis, pancreatitis, insulitis, primary biliary climulonephritis, thyroiditis, pancreatitis, insulitis, primary biliary climulonephritis, thyroiditis, pancreatitis, sequence used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       anti-CD40 monoclonal antibody, CD40; cytostatic, virucide, antibacterial, immunostimulant, anti-HIV, hyperproliferative; cancer; viral; bacterial infection; immunodeficiency; neutropenia; HIV; gene therapy; human; light chain; 23-28-1.

Homo sapiens

The present invention describes a composition (I), comprising a polypeptide comprising an antibody-based antigen-binding domain of human composition with binding specificity for an antigen expressed on the surface of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the ICSO for the suppression of immune response, and the ICSO for antirheumatic, antiathritic, neuroprotective, antihilammatory,

The invention relates to a novel chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40. The anti-CD40 antibody of the invention demonstrates cytostatic, virucide, antibocterial, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder such as cancer, viral and bacterial infection or genetic, primary or combined immunodeficiancy conditions including neutropenia or HIV in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody full length light chain protein of the invention.
                                                                                                                                                                                                                                                          New chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 ATCTCCTGTCGCTCGAGTAAGAGTCTCCTGTATAAGGATGGGAAGACATACTTGAATTGG 120

This sequence represents the light chain variable region (VL) of murine anti-OD23 (FCERII) monoclonal antibody C11. The invention provides anti-OD23 (FCERII) monoclonal antibody C11. The invention provides alteria antibodies, such as chimeric or humanised antibodies (see AAY32262 and AAY32263), which comprise sufficient of the amino acid sequences of the C11 light and heavy chain complementarity determining regions (see AAY32254-59) to render them capable of binding to the CD23 type II molecule expressed on hamanacopoietic calls. The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple clerosis, diabetes, uveltis, dermatitis, psoriasis, urricaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative collitis, Crohn's disease, COPD, insulitis, bronchitis (particularly chronic versus-host disease, COPD, insulitis, bronchitis (particularly chronic bronchitis) or diabetes (particularly type I diabetes), and B-cell malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and determining the binding agents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             40,
cytostatic, virucide, antibacterial, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder such as cancer, viral and bacterial infection or genetic, primary or combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD40 antibodies may also be useful for detecting CD in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody variable region light chain protein of the invention.

```
The invention relates to a novel chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CB40. The anti-CD40 antibody of the invention demonstrates cytostatic, virucide, antibocterial, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder souch as cancer, viral and bacterial infection or genetic, primary or combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD40 antibodies may also be useful for detecting CD40 in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody variable region light chain protein of the invention.
                                                                                                                                 that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or
                                                                                                            or human monoclonal antibody or its antigen-binding

Human PTHrP monoclonal antibody clone 16E12-6 protein SEQ ID NO:6.

Human; parathyroid hormone related protein; PTHrP; monoclonal antibody; hypercalcaemia; rheumatoid arthritis; bone cancer; metastasis; pain; fracture; cachexia; tooth disease; periodontal disease; gingiva; sepsis;

301 TTCACGTTCGGCCAAGGACCAAGGTGGAGATCAAACGTACGGTGGCT 348

The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHrP). The monoclonal antibody or lits fragments, following the stimulation of PTHrP has the following properties: (a) inhibits intracellular elevation of PTHrP his the following content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphateemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHrP monoclonal antibody clone protein sequence from the present human monoclonal antibody to parathyroid hormone related protein. - seful, for treating hypercalcemia, rheumatoid arthritis, cancer of bone systemic inflammatory response syndrome; SIRS; hypophosphataemia; antiarthritic; cytostatic; antiinflammatory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40. The anti-CD40 antibody of the invention demonstrates cytostatic, virucide, antiboteraid, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD40 antibodies may also be useful for detecting CD40 in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody variable region light chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    anti-CD40 monoclonal antibody, CD40, cytostatic, virucide, antibacterial, immunostimulant, anti-HIV, hyperproliferative, cancer; viral, bacterial infection, immunodeficiency, neutropenia, HIV; gene therapy, human, variable region light chain, 23-29-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

This invention relates to a combination of an anti-Ep-CAM (cyclic adenosine monophosphate) antibody with a chemotherapeutic agent, that is chapable of arresting Ep-CAM antigen expressing cells in the synthesis ($) phase or the second growth phase ($M$) of cell enlargement ($G2\/DNA$ replication. The antibody exhibits cytostatic activity and is useful in the manufacture of a medicament for use in anti-cancer therapy, characterised in that a chemotherapeutic agent, which is capable of arresting Ep-CAM antigen expressing cells in $S$ or in $G2/M$, is $C0-faractered to a patient with an anti-Ep-CAM antibody. The combination is useful for treating cancer, particularly colorectal cancer, breast cancer, gastric cancer, presents cancer or non-small-cell lung cancer. The present sequence represents the kappa light chain of anti-Ep-CAM antibody known as humanised 323/A3 (IgG2Cys) which can be used in the combination of the invention
                                                                                                                                                                                                                                                                                            300
                                                                                                                                                                                                   100
